

ABSTRACT

A session initiating method that is applied to a computer system equipped with a GUI includes specifying an icon image that corresponds to each of users (S103); determining whether the icon
5 image includes a UID and a password that are necessary for log-in, and extracting the UID and the password in accordance with an algorithm that uniquely corresponds to each of the users (S104, S105); inputting start information extracted while a log-in process is being carried out (S107); and determining whether the input start information meets
10 condition for log-in, and establishing a log-in process (S108, S109).
